Note on seasonally adjusted employment:

Each year BLS calculates seasonal factors and seasonally adjusted data using the X-12 ARIMA model. In the past, the procedure has been to adjust data only at the supersector level. Beginning with the 2006 benchmark, however, most data has been adjusted at the 2-digit NAICS level and aggregated to the supersector level. In addition, for some series, the adjustment was based on a longer time series than used in the past. These changes have resulted in a higher degree of seasonal movement in the data.
